ABOUT THALASSAEMIA

THALASSAEMIA is an inherited blood disorder; patients cannot produce sufficient haemoglobin and needs monthly blood transfusion to sustain life. Repeated blood transfusions will result in excessive iron deposit in the body; daily injection of iron chelation for 8 to 10 hours is required to maintain health.

ONE IN EVERY EIGHT PEOPLE carries the genes of Thalassaemia in Hong Kong. If both parents are the thalassaemia carriers of the same type, each child will have 25% of chance becoming a thalassaemia major.
